

Product sheet:

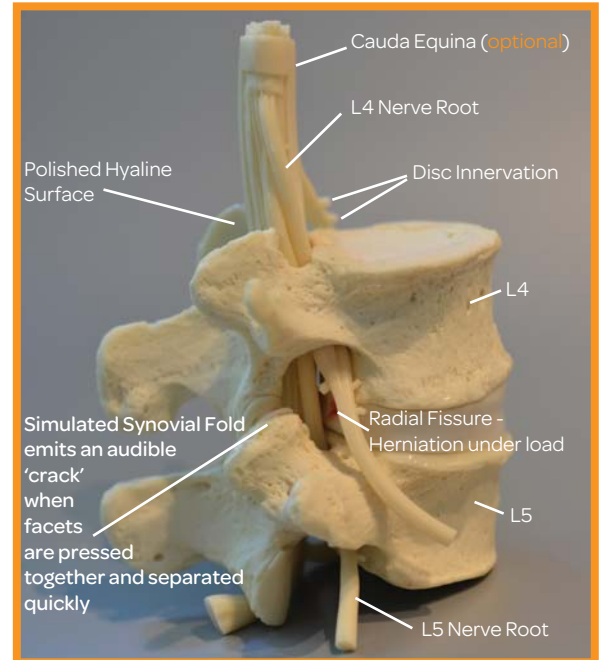

Audible Release Model - The Oracle

Product Description

The Oracle – audible release model. A new spinal manipulation model generating an audible release ‘crack’ when the facets on the right side of this L4-5 dynamic disc model are pressed together and released quickly. If manipulation is part of your practice, this model will help explain to patients the separation of the articular surfaces. Details include: 2-part dynamic intervertebral disc (nucleus pulposus and annulus fibrosus), simulated synovial fold that emits an audible sound when distracted, life-size L4 and L5 vertebrae, palpable smooth hyaline facet surfaces and one with a roughed surface, red nuclear herniation under load through a torn annulus.

Additional Information

Cauda Equina available as an optional feature.
